

LabPlus technology offers competitive advantages

- A generic solution, adaptable to a wide range of process requirements
- Easy to use
- Fast to implement and able to yield immediate benefits
- Open architecture that can be easily integrated across your organization
- A complete solution for your laboratory and quality information management needs
- An attractive price

Technical support and software update

By selecting LabPlus you also select a technical support service always ready to help you leverage your investment in LabPlus. We offer update programs designed to maintain the level and quality of the functionality of LabPlus, ahead of the competition.

Company profile

LabPlus a product of Logiq Innovations is a privately owned company headquartered in Joliette, with Canadian operations located in Montreal, Quebec. Our business focus is the support, development service and sale of LabPlus LIMS software as well as other products and services required to provide complete LIMS solutions. Our employees are chemists, computer scientists, and engineering professionals with expertise in laboratory operations, information technology solutions, project management and SR&ED (scientific research and experimental development).

LabPlus Technologies' mission is to combine industry expertise with leading software development technologies to provide generic laboratory informatics that are rapidly implemented, meet strategic needs and generate immediate customer value.

LabPlus is a global laboratory and quality information management system that will provide consistent, accurate and timely quality information meeting the needs of your organization

Functions

Analytical Profiles offer advanced sample logging and grouping capabilities that allow the implementation of stability studies, complex product sampling plan and testing schema.

The Scheduling Service provides increased capabilities to customize conditions that trigger events with the ability to schedule the execution of any system workflow, as well as to initiate requests to the Notification Agent.

The Notification Agent allows the configuration of events that will be monitored by the system along with the notification mechanisms should preset conditions be reached.

The Workflow Modeler allows customization of system workflows as with LabPlus, analytical operations are executed from within a workflow. A workflow can contain single or multiple steps.

Quality Controls feature provide increased capabilities, improved tracking and control of laboratory operations. All QCs integrate similar attributes and provide enhanced capabilities such as charting, and management of multilayer of controls.

Product, and Grades functions with Multi-Specifications capabilities provide a product grade concept which allows targeting of specific grades for a given product and reclassification of any product grade after analysis.

The System Security is applied through roles. The authentication and authorization services are located in the business layer. These mechanisms provide enhanced system reliability with greatly reduce configuration and maintenance efforts for multi-user and multi-site installations.

Benefits

The benefits of implementing a global information management system are numerous.

Productivity gain

Less time is spent searching for results and sample information, calculating results, processing samples, generating reports, registering and identifying samples, planning and allocating workloads.

Improved data accuracy and consistency

Reduced risk of calculation and data capture errors from the use of data validation, automatic data acquisition, and bar code reading equipment.

Rapid and open access to quality information

Quality information stored in LabPlus is accessible for extended periods of time to multiple applications and users serving other functions in your organization.

Better utilization fo resources

Optimal laboratory workload planning, as well as, automatic detection and notification of configurable events ensure a more timely and efficient response by the laboratory to the needs of your internal and external clients.

Increased agility

React rapidly to changes in the environment such as acquisitions, export laws, new regulations, products, and standards.

LabPlus is a powerful tool that will have a positive impact on the ability of your organization to maintain and increase customer satisfaction and contribute to the success of your business.
